

Hannah Lambert
Final Project Proposal

Idea:

For my final project I chose to use data involving the average monthly housing cost in the United States compared with the average monthly income to see how much Americans are spending of their income on their housing costs.

Where I found my data: I found my data on American Fact Finder- United States Census Bureau.

Types of Map: I would be using two interpolation maps to compare my data.

What I'm expecting to find: I would expect to find that larger cities where people have higher salaries would be spending more on their housing but it would be as much compared to their salary. Whereas people who don't make as much spending more of their income on their housing.
